

A World of Personal Technology

Timex-Sinclair 2068 - \$174.95 (with a software purchase)

At last! The world's finest color computer is ready for shipment. The Timex-Sinclair 2068 combines futuristic features such as memory bank switching to 16 megabytes with the low cost made possible only through advanced production techniques. Right out of the box, with no add-on accessories nor expansion boxes to purchase, you get the following: 1.) 24K ROM (Simplest in the World) Sinclair BASIC Operating System featuring one key command entry, high resolution color graphics, and extended Basic with a microdrive operating system. 2.) 48K RAM...making for a total computer memory of 72K not including up to 56K additional ROM in the software cartridge port. 3.) Program selectable video displays of 32 and 64 characters in width. Wide enough for serious word processing and spreadsheet work with ports for either TV or Monitor viewing.

ezanna komit

4.) High speed cassette system for faster SAVEs and LOADs with any standard cassette player. 5. Joystick ports.
6.) The ability to interface with a soon-to-be-released \$100.00 microdrive system! The Full Travel Molded Keyboard gives the touch sensitivity of a typewriter style keyboard without the expense and vulnerability to spills. It features a full space bar, dual shifts, and upper and lower case letters. All characters and commands are printed right on the keyboard for quick and easy reference. The key spacing is scaled to typewriter proportions and you have the added benefits of auto repeating keys, a reset key, and one key entry of BASIC commands.

Buy your TS2068 from us and you're as close as a phone call if you have problems or questions. And now, we offer the TS2068 at a very attractive price: \$174.95 with a software purchase. You pay \$199.95 and receive \$25.00 credit toward any TS2068 Software purchase. This brings your cost down to \$174.95. If you have purchased a TS2068 from us already, this discount is still available to you. In either case, just enclose this brochure along with a copy of your TS2068 Receipt when ordering software and you'll receive the \$25.00 credit.

TS2068 Software on Cartridge The first software available for the new TS2068 is also the best. An improved version of the VU-Calc spreadsheet program will make use of the 64 character display to do your number crunching and numerical planning. An upgraded VU-File data base will use the whole 48K of RAM to store your information...formatted any way you want it. The Budgeter will track personal and business expenses in up to 50 catagories. If entertainment is your bag, the Pinball game will amaze you with it's graphics and speed. The Penetrator will have you on the edge of your seat flying space bombers through suicidal bombing runs. And, the new Flight Simulator program makes especial good use of the high resolution graphics of the TS2068 for more realistic instrument flight practice. All of these programs are on solid state cartridges so they are instantly loaded and take up none of your available RAM. More programs are forthcoming so call or write for an update from time to time. An up to date list of available programs will be packed along with your new TS2068 when we ship it.

Timex-Sinclair 1500 Computer

If there is such a thing as a computer designed to fit every need and budget, the Timex Sinclair 1500 is it. Unlike other low priced computers, you don't have to buy alot of additional equipment to make the TS1500 into something that can do serious computing. It comes with enough power and sophistication to handle just about any computing job. You don't have to buy more memory... it already has 16K of RAM. You don't have to upgrade the operating system. Other computers come with only rudimentary BASIC. To make them capable of anything useful, you have to buy an "Extended" BASIC operating system. The TS1500 already has the world famous Sinclair BASIC System. You get scientific functions, logic, graphics, basic math functions, one key entry of BASIC commands, the ability to program in machine language if you want to. Try a TS1500

for awhile and you'll see what we mean. Try it too long and it'll spoil you for any other computer ... it's that good. You don't have to buy an expensive monitor or color TV to see what you're computing. The TS1500 works on any standard TV set...even motel TV's (handy if you travel alot). You don't have to buy a special disk drive or "Data" cassette recorder at inflated prices. The TS1500 workd fine with most standard cassette recorders. And work it does. You see, although the TS1500 is a brand new computer, it works with all of the software that's been developed for the TS1000/ZX81 computers. You don't have to wait a few years to get decent software. We already have programs to fit almost every computing need from business to personal to education and games. But, there are some new solid state cartridges coming along too. They'll carry some improved TS1000 programs and some brand new TS1500 programs and will instantly load in a new 1510 Command Cartridge Player. To add icing to the cake, the TS1500 comes with a brand new, state-of-the-art, full stroke, spill resistant molded keyboard. The keys sensitive to your touch...comfortable. If you don't believe the TS1500 is the best computer buy going, check out the other low cost computers. You'll find machines with old fashioned typewriter keyboards and 2-4K of memory in the same price range. There may be one with as much memory as the TS1500. But if you check further, you'll find other shortcomings. You'll find it doesn't come with "Extended" BASIC. You'll have to buy expansion boxes software and circuit boards at outrageous prices to upgrade to a standard TS1500's capabilities. See what kind of picture you can get on a TV set...or if you have to buy a monitor...or a color TV (What would you use color for anyway?) And, check out how much the special data cassette or disk drive will run you. Whether you plan to use a computer alot or a little, it makes no sense to spend more than you have to. The new TS1500 is probably more computer than you'll ever need for a long, long time. Order one today and know the feeling of having bought

Timex Sinclair 1510 Command Cartridge Player. This module plugs onto the back of your TS1500 extending the expansion port as well as providing a port for plugging in the new solid state program cartridges. These are expected to be in stock around the middle of September.

Timex Sinclair 2050 Modem No expansion box nor interface is required. Just plug the TS2050 into your TS1000, TS1500, or TS2068 and you're ready to telecompute with the world. The TS2050 Modem provides access through your computer to any database or other computer equipped with a modem. These should be available in mid-November.

Timex Accessories

TS2020 Program Recorder. While the Timex computers are designed to operate with standard cassette recorders, the TS2020 recorder is designed to specifically operate with the Timex computers! It features automatic recording level adjustment for proper SAVE volumes and a Vu/Level indicator light for aid in adjusting to the optimum volume for LOADs. The TS2020 workd fine for speech and music recording and playing and is priced in the range of a good standard cassette recorder...only it's custom made to fit your Timex computer to boot! We expect the TS2020 Program Recorders around the middle of November.

The Timex Sinclair Directory. If you own a TS1000, ZX81, or TS1500 computer, this book will prove immensely helpful to you. It tells you what types of accessories, add-ons, software, literature, and practically and everything else are available for your computer. It's packed with photographs and lengthy descriptions so that you can really learn about these products as you are introduced to them. Best of all, there's a directory of supplier's names and addresses in the back of the book so you can contact the right company for you needs without searching through the myriad magazines and books for information. The Timex Sinclair Directory is a 90 page, professionally typeset, double columned page, paperback book. It's hard to believe we only charge \$5.95 for it, but we do. And, every book is sent via First Class mail to U.S. customers. Order your copy today!

Timex Sinclair Joysticks. These joysticks are specially made to work with the new TS2068 computer and plug right into it's joystick ports. They are of exceptional quality for the price charged. Use them for more realistic action when playing computer games.

Thermal Mailing Labels. You've been asking for these for some time now. Well, thermal labels for your TS2040 thermal printer are no longer a pipe dream. They come fan folded in quantities of 1,000 and are peel off pressure sensitive. Use them to run off a batch of mailing labels from such programs as The Organizer or Vu-File. Then just peel them off and stick them onto your envelopes, brochures or cards. Once you've used computer generated mailing labels, you'll never go back to other methods...it's so much easier with your computer! These labels will work with the Timex Sinclair 2040 Printer, the CAI/P40 printer, and the new Alphacom thermal printers. We expect our initial shipment by the end of November but anticipate a heavy demand around Christmas time...what with Christmas cards and all. Place your order early to be sure you get in on our first shipment.

QSAVE on EPROM. For ZX81/TS1000/TS1500 computers. QSAVE speeds up the data transfer time on cassette SAVEs and LOADs. For example, 16K programs and data will normally take around 7 minutes to LOAD/SAVE. With QSAVE they take less than 30 seconds! The QSAVE system consists of about 500 bytes of machine code-programming and an amplifierfilter device for purifying the signal. The new EPROM version makes the software an instant part of your computer system...you never have to LOAD it from cassette. It works with virtually all cassette based programs from 16-64K since it locates the QSAVE software below the 16K memory address. The new EPROM QSAVE is available complete with the amplifier/filter unit and cables, or as the EPROM alone...for those of you who already own the cassette version of QSAVE. Our ribbon cable is necessary for connecting QSAVE to your computer.

MKIV Keyboard Kit. Our best typewriter style keyboard replacement for ZX81, TS1000, and TS1500 computers is now available in a low priced kit version. These kits feature the same high quality keyswitches and sublimated legend keytops as our assembled versions. Only, you save money by assembling them yourself. The kits come in 2 parts. Part I is the keys and circuit board and part II is the molded black case. Assembly isn't difficult, but if you do make a mistake, we'll restore the board to operable condition for a service charge of \$15.00. At this price, you can't afford not to have this full size keyboard...even if you only use it for word processing. Order today!

MMRY-REZ 64K Module For TS1000, ZX81 computers. This unit provides a full 64K of RAM plus high resolution graphics plus high resolution graphics software! Plug it onto your computer and use the memory for your usual data processing. A simple switch controls the 8-16K addresses making them accessible when you use EPROMs or interfaces. This memory is compatible with Memotech peripherals and the TS2040 printer. The high resolution system draws circles, lines, and geometric shapes with the use of simple commands...no programming needed. Four video pages are supported and you can set them to switch back and forth for animation. Check the price on this unit and compare with others. It's really quite a bargain.

Programmer's Toolkit. For 16K ZX81, TS1000, and TS1500 computers. This is a programming aid that features line renumbering including GOTO's and GOSUB's allowing you to open up space for more program steps or just neaten up your programs. The Free Space function tells you how many bytes of memory you have remaining in RAM. A Search and REPIACE function changes the occurrence characters as you require. There's even a tape routine that provides a system wait condition until a signal is received from the cassette player. For graphics, a hyper graphics mode instantly fills the screen with any character you choose. Reversing the screen is possible too. This program is made to be co-resident with our Graphics Kit at the same time if you want...providing a superb combination of graphics and toolkit functions. Everything is in machine code to take up little memory and run fast.
